Technical Specification of Rapid Plasma Reagin (RPR) for Syphilis Testing

1. The assay should be suitable to perform with either serum or plasma.
2. The assay should allow for qualitative and semi quantitative determination of Reagin antibodies in serum or plasma for sera-diagnosis of syphilis based on flocculation principle using non-treponemal antigens.
3. The assay should have sensitivity of 85% or more in primary syphilis and a specificity of 93% or more.
4. The test should be able to yield results within 30 minutes.
5. The pack size of RPR test kit should be less than or equal to 50 tests per kit.
6. The assay components should include positive and negative serum controls sufficient for conducting 20% of the tests (10% negative and 10% positive controls).
7. The kit should have all essential accessories required for the test such as cards, droppers, applicator, etc. in adequate quantities for the number of tests to be performed.
8. The kits should have a shelf life of at least 24 months and at least 5/6th of the minimum shelf life must remain at the time receipt by the consignee.
9. The manufacturer/authorized agent should ensure maintenance of cold chain during storage & transport of the kits at 2-8° C. The cumulative time temperature indicator Technology used should be pre-qualified by WHO.
10. Product should be licensed by the competent authority defined under Drug & Cosmetic Act 1940 and/or Medical Devices Rules 2017.
11. Adequate documents detailing the components, methodologies, materials provided and materials required but not provided in the kit, biosafety compliance, validity criteria, interpretation of results, performance characteristics, storage conditions, manufacturing, limitations and expiry date should be provided with each kit.
12. The product insert should have the pictorial representation of the test methodology.
13. The assay should be calibrated to WHO reference standards from a third party accredited laboratory.
